

WALIDAYN

الوالدين · the two parents. The word the ayah uses.

We help Fatima and her two siblings, who never know who gave their mother's last dose, by giving them **one record of her care that only they can read**, and that writes the handoff so none of them has to.

words of her record our server can read. The family's key is made on the phone and never leaves it.

Fatima, 34, Saint-Laurent. Her mother Ammi is 78.

9:41

Sat 6 Sep

Ammi · family group · 3 people

Fatima · 07:52

did she take the morning ones?

?

Sister A · 08:10

yes. she ate half. who has her this afternoon?

Abdullah · 08:41

I thought Fatima. pharmacy at 11 I think?

?

Fatima · 09:15

what did Dr Rahman say wednesday??

?

Sister A · 09:20

Three questions in ninety minutes. None of them answered by the chat.

3 children sharing the days	3 pill times a day	2 hospital visits this year	0 shared records. A WhatsApp group, a fridge chart, and memory
--------------------------------	-----------------------	--------------------------------	---

Ammi speaks Urdu, prays five times, and does not use a phone. **Whoever is with her is the only one who knows anything.**

SAID, BY A REAL CAREGIVER

One of them gives the pills, hours later another asks whether he took them, and “**nobody is 100% sure.**”

HERE, NOW

A woman of 70 went into a retirement home in Quebec. They served her pork. She came home to her family in tears and asked why the Muslims of Quebec never built a home that could look after her. A family in Quebec told us this in September 2026. It is first-hand and it is not a documented case, and I would rather tell you that than leave it out.

Sixteen teams picked this problem. Here is what they miss.

Everyone builds a calendar with a chat bolted on. A chat is a conversation. Care needs a record.

A RECORD		
Morning pills	done 07:40	Sister A
Breakfast	half eaten	Sister A
Pharmacy 11:00	next	Abdullah
Dr Rahman, Wed	note saved	Fatima
THIS WEEK · SISTER A 62%		
The plan, what was done, who did it, what is next. You can ask it a question.		

NOBODY WRITES THE
TRUTH
WHERE A STRANGER
READS

ON HER FAMILY'S PHONES
"did not know me today"

ON OUR SERVER

"She refused her food and did not know me today" never goes into a shared app. So we built ours where the server cannot read it.

SO WE BUILT

A record. It keeps Ammi in her own home, with her own family, and it carries her wishes to whoever walks in the door next.

A missed dose costs nothing on Monday. It costs \$304 by Saturday.

\$304

the full hospital cost of one emergency department visit in Canada. CIHI 2018-19, excludes physician pay and Quebec.

303

of 570 most-read caregiving posts describe this exact failure

53% OF EVERYTHING PEOPLE POST

87

threads asking for exactly this tool

EVERY YEAR SINCE 2017. NOBODY ANSWERED.

THE ARITHMETIC

\$304 · ONE EMERGENCY VISIT

\$300 · ONE FULL YEAR, ONE ELDER

Families pay \$0, forever.
Businesses pay for the professional layer.

Two real prices, side by side. We have not measured a saving yet.

One handoff, start to finish. Then Monday morning.

EVERY PART OF THAT DEMO IS REAL

Encrypt on the phone, event stream, projector, database, decrypt on the other phone. The elder consent filter is the one thing we have not built, and we kept it out of the demo.

AFTER SUNDAY

I built the record, the encryption and the server. **safio** built the interface and the onboarding. A geriatric nurse reviews every recommendation, masjid welfare committees introduce the families, and five Montreal families start Monday.

WHAT BREAKS FIRST

The key. No rotation and no recovery today, so a family that loses every device loses the record. It is the first thing we build. We are telling you now instead of waiting for you to ask.

THE AYAH

Your parents kept a record of you when you were small. What you ate, when you slept, which medicine and how much. Walidayn keeps that same record for them.

Two plans. Every feature, side by side.

FAMILY

\$0

forever, unlimited elders
anyone caring for a parent at home

BUSINESS

\$300

per elder, per year, one invoice
agencies, masjid welfare, CLSCs

THE CARE RECORD

Routine, and today's plan built from it	✓	✓
Log what happened, in one tap, with undo	✓	✓
The handoff, what happened and what is next, written for you	✓	✓
Live on every phone, no refresh	✓	✓
The record by day, by week and by month	✓	✓
Recommendations for the day, reviewed by a nurse	✓	✓

HER SIDE, AND EMERGENCIES

Her preferences carried on every handoff	✓	✓
I need help, straight to every phone	✓	✓
Her own big-type screen, in her language	not included	✓
Hospital sheet, fourteen days, printable	3 a month	Unlimited
Emergency alert, always on, cannot be turned off	not included	✓

Two plans, continued.

FAMILY

\$0

forever, unlimited elders
anyone caring for a parent at home

BUSINESS

\$300

per elder, per year, one invoice
agencies, masjid welfare, CLSCs

PRIVACY AND OWNERSHIP

End-to-end encryption. The key never leaves the phone	✓	✓
Server view: see exactly what we can see. Nothing	✓	✓
Export the whole record any time, or host it yourself	✓	✓

PEOPLE, TEAMS AND ORGANISATIONS

Family members and devices	Up to 5	Unlimited
How a new member joins	Family code	QR, in person
Support worker logins, one login across every family served	not included	✓
Worker dashboard, and a visit log written on every shift	not included	✓
Coordinator alerts, and the professional recommendations	not included	✓
Several elders on one invoice, and named support	not included	✓

THE ARITHMETIC

40 elders cover the server for a whole year, about \$1,000 a month. 200 cover the server and the first hire. One emergency visit costs the system \$304, CIHI 2018-19. Server figures are our estimates. No trial period. We do not keep a card on file and nothing renews on its own. Every family gets the record for free, and the professional layer is what a business pays for.
